

Tombow Product List Recycling Rate

as of 31.01.2020

As part of a packaging change in 2019, we have made the calculation basis for our recycling percentages more transparent. Up to now, the percentage of recycled materials has been determined solely by the plastic used. Consumables, such as the tape of the correction tape or the adhesive in the glue stick, were not considered. In order to make the calculation more transparent for our customers, we will indicate the recycling percentage based on the total weight of the product (including all consumables) in the future. This results in different recycling percentages. However, the products themselves have not been changed.
